

**INSTRUMENT
COMPANY**

When it comes to flow...we're instrumental.

King Instrument Company opened its doors in 1983 with one major goal: To produce the finest group of rotameters ever sold.

At the time, we occupied a 1,200 square foot space in a multi-tenant building. With two small manual lathes, a cut-off saw, and two drill presses, we began production. The product line consisted of a total of 19 model numbers. In our first year of business, sales were just over \$37,000.

A lot has changed in 35 years. We now run two shifts and utilize the most sophisticated computer controlled machinery. King Instrument Company currently calls its home a 46,000 square foot facility in Garden Grove, California. We now manufacture 95% of the 6,000 meter components used in our products. These include the borosilicate glass metering tubes we call Kinglass. We operate an in-house calibration lab and perform NIST - traceable calibrations conforming to ISA RP 16.6. Our Quality Management System was certified to ISO 9001:2008 in 2012 and upgraded to ISO 9001:2015 in 2017. We also acquired Canada-wide CRNs for our metal tube meters in 2013.

We are sensitive to our customer's requirements. In fact, nearly all of our products were designed in response to customer need with our own exceptional quality and distinctive style. The King product line has grown and expanded to satisfy the demands of almost any variable area flowmeter application.

Did we reach our original goal? You be the judge. The next time you're in the market for rotameters consider King Instrument Company. We think you'll agree there is no better time than right now to discover the advantages of the King line.

After all, when it comes to flow . . . we're instrumental.

Latching Reed Switch alarm available for 7310, 7330, 7470, 7480, 7610, 7910 Series

7330 with Latching Reed Switch

A latching reed switch is available for 7310, 7330, 7470, 7480, 7610, 7910 Series flowmeters. Operating temperature range is -40° C to 125° C.

The switch assembly is mounted on the side of the metering tube by a dovetail or guide rod. The switch can be positioned to trip at any point on the scale.

The switch is a reed type and uses a biasing magnet to give it the latching feature. The float contains hermetically sealed magnet(s), so when the float comes in close proximity to the switch it closes and remains closed (latched) when the float moves past the switch. When the flow returns to normal and the float moves below the switch it resets itself. Multiple switches can be used.

SWITCH ISOLATOR OPTION

Latching reed switches can be used as stand alone devices, or may be connected to a switch isolator for intrinsically safe applications. The purpose of the switch isolator is to supply electrical signals between safe and hazardous areas in either direction while limiting the amount of energy that can be transferred even under fault conditions. Switch isolators are available with 220 VAC, 110 VAC or 24 VD supply voltage requirements, contain single pole double throw (SPDT) relays, and are DIN rail mountable. See switch isolator specifications for electrical connections and further details.

Inductive Slot Sensor alarm available for 7100 Series

7100 with Inductive Slot Sensor

All 7100 Series flowmeters may be fitted with one inductive slot sensor.

Inductive sensors are 2-wire, DC low current devices and are designed to be used with a remote barrier/switch isolator capable of powering the sensor and providing the desired switching option(s). Barrier/switch isolators are available with 220 VAC, 110 VAC or 24 VDC supply voltage requirements, contain single pole, double throw (SPDT) relays, and are DIN rail mountable. (Only 24 VDC units are actually powered by the rail.) See barrier/switch isolator specifications for electrical connections and further details.

The operating temperature range for this sensor is -13° F to 158° F (-25° C to 70° C).

Note: We can supply the isolator / barrier upon request, but the user must provide the power supply voltage.

Inductive Ring Sensor alarm available for 7430, 7440 Series

7440 with Inductive Ring Sensor

INDUCTIVE RING SENSOR

7440 Series flowmeters with metallic floats can be ordered with an inductive ring sensor that is able to detect a predetermined rate of flow and is compatible with stainless steel or Carboloy floats only.

Inductive ring sensors are 2-wire, DC, low current devices and are designed to be used with a remote intrinsic safety barrier /switch isolator. Sensors are available as either proximity or latching devices. The sensor can be positioned to trigger at any point on the scale. It is able to detect the metal float by producing an electromagnetic field that senses the float within its sensing zone.

The inductive sensor connects to a barrier/switch isolator which powers the sensor and provides the desired switching option. Barrier/switch isolators are available with 220VAC, 110VAC or 24VDC supply voltage requirements, contain single pole double throw (SPDT) relays, and are DIN rail mountable. See barrier/switch isolator specifications for electrical connections and further details.

Maximum operating temperature 40° C for 1/8" float; 70° C for 1/4" float.

Note: We can supply the safety barriers/switch isolators upon request. User must provide the power supply voltage.

FIBER OPTIC SENSOR

The fiber optic alarm sensor is an available option for all 7440 Series flowmeters and is compatible with all float materials except sapphire. The sensor is used to detect a predetermined rate of flow. The sensor can interface directly to a Programmable Logic Controller (PLC) or when connected to a separate relay can trigger a local or remote alarm.

The fiber optic sensor is mounted in a junction box attached to the side of the flowmeter. The sensor uses a pair of fiber optic cables, an emitter and receiver, to transmit the light generated by the sensor. Note: Maximum operating temperature 131° F.

Barrier/Switch Isolator

BARRIER/SWITCH ISOLATOR

A barrier/switch isolator is designed to supply power to the NAMUR sensor, read the output state of the sensor and provide the desired safety and switching options based on the sensors current state. The barrier/switch isolator has three sets of connections: the supply voltage (powers the barrier), an input stage (accepts sensor inputs), and an output stage (relay or transistor switching). Supply voltages are 220VAC, 110VAC, or 24VDC. Switch isolators may receive an input from inductive sensors or dry mechanical contacts. The input circuit between the sensor or mechanical contact and the switch isolator is suitable to be installed in a hazardous area under the designation "Intrinsically Safe". Supply voltage and switching options must be specified when ordering.

Floats

How To Read Different Floats

Options for rotameter float materials and designs extend flow ranges for different fluids within a given rotameter tube design. In the simplest float design type, a ball float, different flow ranges are achieved by substituting same diameter ball floats of differing specific gravities.

No Viscosity Compensation

Lowest meter capacity and no viscous fluids with medium capacity.

Minimal Viscosity Compensation

Maximum flowmeter capacity with limited viscosity immunity.

Semi - Viscosity Compensation

"RS" Rib Guided:

High flow capacity with some immunity to viscous fluids.

Rod Guided:

Analogous in design to a sharp edge orifice gives most immunity to viscosity variations of the fluid being metered.

Lowest Pressure Loss

Maximum - Viscosity Compensation

"RV" Rib Guided:

Highest immunity to viscous fluids with medium meter capacity. (Most stable)

Analogous in design to a flow nozzle or venturi offers the maximum capacity in any given size flowmeter.

This warranty does not apply if the failure is caused or contributed to by any of the following: improper handling, improper storage, improper installation, abuse, unsuitable application of the product, lack of reasonable and necessary maintenance, use exceeding suggested pressure and temperature maximums, improper packaging for return, or repairs made or attempted to be made by other than the Company.

THE COMPANY MAKES NO WARRANTY AS TO THE FITNESS OF ITS PRODUCTS FOR SPECIFIC APPLICATIONS.

This warranty is valid for the original end-user only and does not apply to products that have been damaged or modified. This warranty is nontransferable and is limited to replacement or repair. The liability of the Company arising out of its supply of the products, or their use, shall not in any case exceed the cost of correcting defects in the products as above set forth.

NOTE: If it is determined by King Instrument Company that repair charges are required, our Quality department will contact you to receive a purchase order for the work needed. If we do not receive a purchase order from you within 30 days from our initial request, we will return the meter freight collect without repair. We are unable to store returned meters over 60 days.

DISCLAIMER

This warranty is a limited warranty and shall be in lieu of any other warranties, express or implied, including but not limited to any implied warranty or merchantability or fitness for a particular purpose. There are no other warranties which exist beyond the description or face hereof.

In no event shall the company be liable for loss of profits, indirect, consequential or incidental damages.

CAUTION

Pressure and temperature limits are based on a study of the engineering data for particular materials used in construction and on the design of individual models. This information is supplemented by destructive testing results. Pressure and temperature maximums for these meters are simultaneous.

WARNING

Meters with stainless enclosures must never be operated without shields securely in place. Meters exposed to difficult environments such as those created by certain chemicals, excessive vibration or other stress inducing factors could fail at or below the suggested maximums. NEVER operate meters above pressure and temperature maximums. Meter failure could result in damage to equipment and serious personal injury.

Always use suitable safety gear including OSHA approved eye protection when working around meters in service. We are happy to pass along chemical compatibility information that has been published by the manufacturers of raw materials used in our products; however, this information should not be construed as a recommendation made by King Instrument Company, Inc. for a specific application. Specifications are subject to change without notice.

RETURNED GOODS

Returns for shortages or inaccurate shipments must be made to King Instrument Company within ten days of receipt. A Return Materials Authorization (RMA) number is required for all returns shipped for repair, warranty evaluation, replacement, exchange or credit. Please call the sales department for an RMA number. A copy of the invoice or shipper must be included. The RMA number must be clearly marked on the shipping package. Return meter in individual packaging equivalent to original packaging. When returning meters that have been in service, include MSDS of chemicals used. Ensure that the meters have been cleaned or flushed of any hazardous materials. There may be a restocking charge on items that are returned when the error is not King Instrument Company's. Items over one year old are not returnable. Damaged shipments should be handled through the shipping carrier. C.O.D. return shipments will not be accepted. If there are any questions call the sales department Monday through Friday, 7:00 a.m. to 4:30 p.m., Pacific Time.
